DESCRIPTORS: Mining engineering, Production, *Coal Fluidized solids, Gases

Progress realized in the mechanization of mines results in an increase in the production of fines. Since their price is lower than that of lump coal, the authors have attempted to develop a gasification process resulting in an increased yield (fluidization). The quality of the gas obtained depends especially on the gasification temperature (950 to 1350°C) and on the thickness of the fluidized bed. The tests in a pilot gas generator
